

Functionalities Developed

1. User Registration and Login:

- A user can register an account with Triis.
- A user can log in to their account securely.

2. Profile Management:

- A user can view and edit their profile information, including personal data and profile picture.
- A user can see the number of followers and users they are following.
- A user can see the number of type 1 points they have earned.

3. Post Creation and Deletion:

- A user can create a new post and share it with the Triis community.
- A user can delete their own posts if they no longer want them to be visible.

4. Post Interactions:

- A user can like posts that they find interesting or enjoyable.
- A user can comment on posts and engage in conversations with other users.
- A user can repost posts that they find valuable or want to share with their followers.

5. Point System:

- A user can understand the point system and how they can earn points.
- A user can earn type 1 points when others repost their original posts.
- A user can earn type 2 points every week via refill.
- A user can see how their points vary based on their actions.

6. Search Functionality:

- A user can search for other users by their username or name.

7. Leaderboards:

- A user can access the leaderboards to see the top users with the highest number of generated points in a specified time interval.

8. Recommendations:

- A user can receive personalized recommendations based on their interests and of the users they follow.

9. Feed

- A user can sort the posts they see depending on the number of points generated or the date they were posted.
- A user can change the scope of the feed so the posts they see are from the people the user follows, the recommendations to the user or other people.
